6) Other: \_\_\_\_.

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 27-32 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 27-32 are directed to a computer software which does not fall into any category of statutory subject matter.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-32 are rejected under 35 U.S.C. 102(e) as being anticipated by THORNTON et al. in U.S. Patent No. 6,363,065 or HO in U.S. Patent No. 6,452,922 or WELLARD et al. in U.S. Patent No. 6,510,219.

By broadly interpreting the TDM switch (250) as the claimed cross connect device, THORNTON et al. discloses a method, apparatus and storage medium having computer program codes for cross connecting the incoming call to both the fallback call over a circuit switched network (20) and VoIP call over a VoIP network (30) based on continuously monitored quality of service of the VoIP network (see col. 4, line 44 to col. 5, line 28, col. 9, line 47 to col. 15, line 22) as in claims 1-32.

Similarly, by broadly interpreting the switch within the IP interface (304) as the claimed cross connect device, HO also discloses a method, apparatus and storage medium having computer program codes for cross connecting the incoming call to both the fallback call over a circuit switched network (106) and VoIP call over a VoIP network (108) based on continuously monitored quality of service of the VoIP network (see col. 2, line 23 to col. 3, line 2) as in claims 1-32.

Furthermore, by broadly interpreting the switching matrix (100) as the claimed cross connect device, WELLARD et al. also discloses a method, apparatus and storage medium having computer program codes for cross connecting the incoming call to both the fallback call over a circuit switched network (PSTN) and VoIP call over a VoIP network (Unreliable Network) based on continuously monitored quality of service of the VoIP network (see col. 2, lines 9-42, col. 2, line 59 to col. 3, line 15, col. 3, line 26 to col. 5, line 25) as in claims 1-32.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Agraharam et al., Donak et al. and Scott et al. are cited to show the common feature of alternate call routing schemes using gateway/bridge and quality of service information similar to the claimed invention.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alpus H. Hsu whose telephone number is (703)305-4377. The examiner can normally be reached on M-F (5:30-3:00) First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy D. Vu can be reached on (703)308-6602. The fax phone numbers for the
